## Math 9

## 4.2 - Linear Relations I

Name: $\qquad$

## Creating an Equation from a Table of Values (TOV)

Last time, we studied the following pattern:

Let, $\boldsymbol{n}$ represent "the number of tables" and let, $\boldsymbol{P}$ represent "the number people seated around the $\boldsymbol{n}$ tables."
Complete the following TOV:
Determine the equation that relates $\boldsymbol{n}$ and $\boldsymbol{P}$ :

| $\boldsymbol{n}$ | $\boldsymbol{P}$ |
| :---: | :---: |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |
| 10 |  |
| 22 |  |

Determine the equations that relate the given variables in the following TOVs:

| $x$ | $y$ |
| :---: | :---: |
| 1 | 7 |
| 2 | 11 |
| 3 | 15 |
| 4 | 19 |

| $\boldsymbol{m}$ | $\boldsymbol{F}$ |
| :---: | :---: |
| 1 | -3 |
| 2 | 0 |
| 3 | 3 |
| 4 | 6 |

| $\boldsymbol{C}$ | $\boldsymbol{E}$ |
| :---: | :---: |
| 1 | 0 |
| 2 | 0.5 |
| 3 | 1.0 |
| 4 | 1.5 |

| $\boldsymbol{t}$ | $\boldsymbol{S}$ |
| :---: | :---: |
| 1 | 10 |
| 2 | 8 |
| 3 | 6 |
| 4 | 4 |

## Creating a TOV from an Equation

Describe the following Linear Relations as a TOV:
$y=2 x+1$
$C=3 n+3$
$P=-2 d-4$
$S=\frac{1}{2} t+3$

| $\boldsymbol{x}$ | $\boldsymbol{y}$ |
| :---: | :---: |
|  |  |
|  |  |
|  |  |
|  |  |

|  |  |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |

|  |  |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |

The variable in the first column is called the $\qquad$ variable.

The variable in the second column is called the $\qquad$ variable.

## Sketching a Graph from an Equation

Sketch the graph of $y=2 x+1$.
A. Create a TOV for the equation to obtain a set of coordinates.
B. Plot the coordinates on the graph.
C. Join the points with a straight line......ONLY IF IT MAKES SENSE TO DO SO!!!!

## Solving Problems using a Linear Relation Model

A plumber charges $\$ 40$ to come to your house and then $\$ 15.50$ for each hour that he has to work.
a. Create a TOV that shows the total cost for calling the plumber for $0,1,2,3$, and 4 hours.
b. Is the relationship between the number of hours worked and total cost a linear relationship? Explain why or why not?
c. Describe the relation as an equation. Choose appropriate variables.
d. Explain how to determine the total cost if the plumber is required to work for 11 hours...heaven forbid!

The Student Council is planning a dance. The cost of renting a DJ is \$200. The tickets cost $\$ 4$ each.
a. Write an equation that describes the relationship between the total profit and the number of students that attend the dance.
b. Sketch a graph that represents the relationship.

c. How many students have to attend in order for Student Council to break even?
