## Is the ratio of $\frac{\text { Circumference }}{\text { Diameter }}$ a special value???

In the table below, write down the values of the Circumference and Diameter for the various circles that you see on the screen:

| Circumference | Diameter | Value of: $\frac{\text { Circumference }}{\text { Diameter }}$ |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

What do you notice about the value of $\frac{\text { Circumference }}{\text { Diameter }}$ for every circle?
